

Portfolio

I created a portfolio design in [figma](#) and after that I asked for feedback because I was struggling on how I could create the right flow of the website. So I asked dirk and he gave me the following feedback.

*“Try making a wire frame first to check the flow of the website. How would **you** like to navigate through it?”*

Structure

For the structure of my portfolio I made a small [figjam](#) to get a quick overview of how I want to structure my portfolio.

I asked dirk what he thought of the structure and he told me i should make this in figma while i am creating a design because then you will see the animations as well. But the rest of the structure was really clear.

Design

For the portfolio I decided to make a new one and not use the one from last semester. Here is a [link to figma](#). In this design I looked at other portfolios and styles which I find appealing. I adapted this into my own design and based on these websites I created my portfolio.

<https://prism-on.tokyo/prism/>

For this website I really liked the way it animates when you scroll through the website so I want to do something similar on my own portfolio. I will do the same but then with one of my

own letters. So when you scroll the letter P gets bigger and becomes the background of my website.

[monte tomba](#)

I liked the Monte Tomba design and animation because of the 2d animations. They are really appealing to see and give a relaxed feeling to the website. I also liked the different matt colours they give the website a modern look but because of the paper like texture it also gives the older style vibes.

In [my figma](#) you can see what my portfolio looks like and how I applied my inspiration in my own style.
